

LASO™ CEPTOR™

MOHOC TACTICAL VIDEO TRANSMITTERS

STREAM LIVE VIDEO TO COMMAND

Transform your MOHOC® Camera's capability with our new line of Tactical Video Transmitters (TVT): **LASO™** and **CEPTOR™**. Livestream real-time video directly from critical points-of-view to remote teammates and commanders.

Like MOHOC Cameras®, both TVT are small, rugged, simple and deployed in seconds with minimum effort.

LASO™

10X WIFI STREAMING DISTANCE

LASO™ is a two-part booster system that extends MOHOC's existing wifi streaming distance up to 10 times the stand-alone camera, line of sight up to 200m/650ft.

The transmitter unit accompanies the operator with the MOHOC® Camera, while the pre-paired receiver unit stays with those viewing the video on MOHOC's iOS and Android apps.

LASO™ requires no cables and is easily body-worn or stored in a backpack.

CEPTOR™

WORLDWIDE STREAMING WITH GPS

CEPTOR™ is a cellular transmitter unit and software platform that connects to MOHOC® Cameras by either wifi or HDMI cable (you choose), and livestreams over cellular networks to a secure server.

The secure video is then viewable anywhere in the world (access credentials required) with low latency.

CEPTOR™ also includes a GPS antenna, allowing the proprietary Windows software, iOS and Android apps to map location (only when desired), and tile-view multiple cameras simultaneously.

DIMENSIONS

Length..... 60mm
